On-premises IT infrastructure as a service

Information | Last modified 04/2019

Your challenges

Even as everything seems to be moving to the cloud, you still need infrastructure on the premises?

There are many reasons why this might be necessary, e.g. licence terms that stipulate dedicated hardware must be used, "exotic" hardware or data protection requirements that call for specific security measures.

Our solutions

- IT infrastructure services in German data centres
- Reliable takeover of operating tasks: professional, highly reliable infrastructure management based on many years of experience relieves you of all management tasks associated with an IT infrastructure
- Associated application operation, including hybrid (cloud and on-premises)
- Implementation of security specifications, handover of responsibility for ICT to DB Systeml

You will find our up-to-date offering in the ICT Service Catalog

The benefits for you:

- Our solution for on-premises IT infrastructure provides you with a sound foundation for running your applications reliably and securely

Our services

We offer standardised IT infrastructure services in the following areas:

- Servers (Linux, Windows, Solaris), storage/backup
- Databases (Oracle, MySQL)/web application servers in the context of relevant application management
- IT infrastructure monitoring
- Business process monitoring
- Technological advice from our experts

Your contact for these matters:
