

Oracle and Linux consulting

Advice and support for issues relating specifically to Oracle and Linux

Your challenges

As IT becomes ever more complex, and digitalisation and increasing use of the cloud create their own set of challenges, there is a need for wide-ranging technology skills.

You are unable to meet all your needs for knowledge of certain sub-areas yourself? Niche expertise is required either at times or on a permanent basis? Your application or database is not functioning as well as it could or should? You are using an excessively large amount of compute resources?

Our solutions

We will be happy to help you overcome the technological challenges you face in performing your day-to-day tasks by providing you with any expertise you may need to resolve your Oracle and Linux issues.

We also have the right specialists to answer your queries on MS-SQL, MySQL, Postgres or MariaDB.

From targeted consultancy services provided by our experts and tailored to your specific problem, through to support services for particular issues such as how to create templates or automation solutions: we will help you to move forward.

You can choose from advice charged by the hour for a one-off query, or package deals for specific issues.

Our offer to you:

- Advice by the hour:
EUR 123.00/hour
- Consultancy package:
EUR 1,600.00/2 days

The benefits for you:

- Input from skilled experts with deep technical knowledge
- Consultants with many years of experience in the DB Group
- Support available regardless of whether the services are provided in the cloud or on the premises
- Guaranteed adherence to the compliance specifications and data protection regulations of the DB Group
- Access to further niche expertise as required

Our services

- Technological advice (e.g. initial consultation, analysis of the problem and proposed solution)
- Support (e.g. correction of vulnerabilities, performance tuning)
- Support packages, e.g.:
 - Database template (consultation, template creation, handover)
 - Automation (analysis of current situation, possible automation measures, implementation)
